Progress:

I focused on creating Phase 2 and Phase 3 to catch up. Phase 2 was successfully completed and Phase 3 needs to be tested if it is working.

Result:

This time, there were several GitHub commits to be able to see my progress. Phase 2 is done. The surprising factor was that DT (Decision Tree) was the best performing model. I even tried to run a test to see if it is overfit by any chances. The result gave me the answer that it is not, therefore I have interesting results, which I can talk about later. Phase 3 was a little bit more difficult to program. Today (26.), I should be able to see if it was done correctly.

Next Step:

- If Phase 3 is done, start with Phase 4
- Start putting comments and explanation to each phase and files to understand the result
- Maybe make a road map for user to see which file to open first.
- Start making notes for yourself to completely be able to answer all questions for the final presentation.
